## Finally, an All-In-One Payment Processing Solution

With Infoscore products, your organization can finally rest easy and start experiencing real integrated solutions today! Our family of Payment Processing Solutions is perfect for financial institutions, mortgage loan processing, insurance companies, membership, non-profit organizations, government agencies, property management firms and medical payment processing companies. Our family of Payment Processing Solutions is easy to implement and use and is fully scalable, accommodating any size operation, from start-ups to organizations processing millions of transactions per month at multiple sites. As your business grows, you can readily expand your system by adding workstations while using the same software platform. Easily process full-page invoices, multiple statements and checks without coupons. Finally control workflow schedules and business rules, and maximize employee efficiency with multi-user key input and data entry. These full featured payment processing solutions turn remittance processing into more than just opening mail and making deposits. You are now able to provide detailed reports and data-rich electronic files that supply valuable cash flow information to corporate customers.

*74% of B2B payments are still originated by paper check, according to a 2007 study by Association of Financial Professionals.*

- Electronic Check21 & ACH Deposits
- Billing and Work Tracking
- Infoscore Engineered Solution
- Strict Security
- Built-In Upgradability

# INFOSCORE INC. The Processabilities Are Endless!

## Alleviate Productivity Bottlenecks

Time is money. With iPayData.NET you will save both because automation enables you to process your remittance faster and with fewer staff. iPayData.NET will minimize your need to manually enter data by automatically and accurately capturing remittance data that will feed our document storage and retrieval system database.

With iPayData.NET automation, you will add efficiency to your processing, allowing you to focus more on your customers than on your documents. With accurately indexed images in your content management system, your clerks are able to drill down into customers' payment histories.

## Transport Independence

Infoscore's Capture Station supports captured images and data from a variety of scanners as shown below, as well as any Twain-supported Page Scanner and numerous Shoe Box-sized Scanners.

If your transport is not supported, Infoscore will work with you to have it integrated. In the event data and/or image information is already available, the information can be imported into iPayData.NET and processed as if the information were gathered by our system. Infoscore's solution also captures data from only the image file as supplied from 3<sup>rd</sup> party capture software.

## What It Does For You

- Centers an ideal flow for electronic check processing
- Increases on-line collections for financial institutions
- Reduces float and increases cash flow
- Simplifies submissions of electronic files to banks
- Improves accuracy by eliminating the keying errors generated with manual check deposits
- Saves money by lowering check processing fees and reducing staffing resource needs
- Mitigates fraud exposure by reducing paper check handling
- Offers a more convenient & faster way to update internal billing software
